

*As Good*

*As It Gets!*

**PETER HOFER AND THE ART OF THE FIREARM  
AT SCI CONVENTION BOOTH 1813**

BY MICHAEL SABBETH

IMAGINE A GUN MAKER SO PASSION-  
ATELY CREATIVE THAT ONE'S GRANDEST  
WISHES FOR THE MOST FANCIFUL  
FIREARMS COME TO DAZZLING REALIZA-  
TION AS IF CRAFTED BY A FAIRYTALE GENIE.  
IMAGINE A GUN MAKER SO DRIVEN  
TOWARD PERFECTION AND OF SUCH TECH-  
NOLOGICAL SOPHISTICATION THAT THE  
LAWS OF PHYSICS ARE DARED TO INTERFERE  
WITH HIS GENIUS. IF YOUR MIND CAN VAULT  
THESE CHALLENGES, YOU CAN GRASP,  
INDEED, ABSORB, THE ART OF MASTER GUN  
MAKER PETER HOFER.

Brilliant mechanical solutions do not suffi-  
ciently illuminate the breadth and depth of Peter  
Hofer's artistry, whether on the grandest scale or  
the most petit. Sequential safeties and trigger  
selectors for three, four, even five barrel firearms,  
have been crafted. Fabricating .17 HMR rifled  
barrels for the world's smallest double rifle (0.9  
kg) as thin as soda straws yet strong enough to fire  
tens of thousands of rounds has been achieved.  
The world's smallest side-by-side rifle with shot-  
gun barrel below (1.7 kg), the smallest over/under  
shotgun rifle (1.9 kg) and the world's largest  
double barrel rifle calibre 4 bore (13.5 kg) have  
been brought to reality in Peter Hofer's shop in  
Ferlach, Austria, the "city of gunsmiths."  
Technology and artistic advances launch  
Peter Hofer firearms into the realm of the  
sublime. Development of the effective spring  
and firing pin system to fire the .22 Hornet  
and the .410 cartridges of the tiny "Butterfly"  
double rifle/double shotgun combination  
required four years.

The TechnicArt, a side-by-side .375 H & H Magnum, has a built in altimeter, thermometer, watch, shot counter, digital compass and even a GPS tracking system, activated and deactivated by a mobile phone, which, when the firearms is moved, sends a message by satellite allowing it to be located within one meter. The dazzling .375 H & H Magnum side-by-side Tiger rifle boasts Buttini engraving of 8,000 dots per square millimeter, game scenes in yellow, orange, green, red and white gold and the application of a new enamel technique.

Peter Hofer hand-crafts firearms in a mind-numbing forty-two different barrel combinations, over three hundred calibers and a dozen different systems. Some of his walnut burr stock blanks are nine hundred years old and seem to emit an inner luminescence. "Peter Hofer," one writer wrote, "does not compete against colleagues in the gun making fraternity. He is in a world of his own." The statement is not an exaggeration. Peter Hofer crafts the most extraordinary firearms the human species can create. To the degree that photographs can accurately convey truth, the work of Peter Hofer can be experienced by visiting his website: [www.hoferwaffen.com](http://www.hoferwaffen.com).
