

Mare Tranquillitatis

0,67408°N 23,47297°E

Modern technology allows us to gain insights into the undreamt-of depths of universe and space flights enable travels to our nearer cosmic surroundings. The many mysteries of the universe will fascinate mankind forever.

When Buzz Aldrin and Neil Armstrong stood at the Mare Tranquillitatis and looked at the Earth, they experienced a moment of unspeakable silence, a moment of infinity, 384.400 km from the Earth.

Nevertheless it requires a calming down of our flywheel mass, to be able to arrive at the Sea of Calm like Buzz Aldrin or finalize a well thought out technical concept like Peter Hofer. When the maximum is reached and suddenly calm returns, something begins to flow and transcendental arises.

After this moment of silence, Peter Hofer's sensitive handiwork begins with reverence for the exquisite high-performance materials and the imagined experiences reality.

The impressions of the Apollo 11 astronauts and their unforgettable pictures were the inspiration for Peter Hofer's double barrel rifle «Mare Tranquillitatis».

Never before has a human being been so far away from his origin. But even without a spaceship it is possible for us humans to cross infinite distances, because the human imagination and creativity knows no limits.
